Faculty

The training staff consists of NYSDOH-AIDS Institute authorized agencies from local hospitals and community based organizations in Western New York. It was established in response to an increased need for HIV/AIDS education and prevention strategies in the eight county region. The faculty members are health and human service providers with extensive personal and work related experience, making them uniquely qualified to provide relevant and comprehensive training experiences for the participant.

Lori Anthony, RN

SAMHSA Education Coordinator
Erie County Medical Center

Judy Deane Barton

HIV Education
Erie County Department of Health

Mary Goodspeed, RN, BS

HIV Testing in NYS

This course is designed for the medical professional (MD, NP, RN, PA, NMW, LPN) with a basic knowledge of disease process. Topics include overview of HIV infection, treatment update, peri-natal transmission issues/guidelines, sexually transmitted diseases, risk reduction ,post exposure prophylaxis, rapid testing and new streamlined test counseling guidelines. Upon completion participants will have enhanced the skills needed to provide HIV test counseling services consistent with New York State Department of Health requirements. **CME available (1-day)**

HIV and Homophobia

This five hour course will provide a historical perspective on the status of Lesbian, Gay and Bisexual people (LGB) in the United States; confront where prejudice towards LGB people comes from; assist health & human service providers in working with LGB people; and examine the role that homophobia plays in the spread of HIV. **(9-2pm)**

NYS Department of Health
AIDS Institute
**Authorized
Training Agency**

Hepatitis C & HIV

Hepatitis C is at epidemic proportions in the United States and is especially significant in the HIV community. This course will address these issues by covering epidemiology, medical issues, functions of the liver, testing, transmission, risk reduction and treatment.

CME available (1-day)

HIV and Substance Use

Epidemiological data confirms the strong link between substance use and HIV infection. Current information and projections for the future indicate that the client with a dual diagnosis of substance use and HIV infection will command a great deal of attention from both health and human service providers. This one day training is designed to give participants a basic understanding of the role of substance use in transmitting/acquiring HIV; the effects of drugs on HIV disease progression; the biology of addiction, overview of current treatment philosophies and modalities including Harm Reduction. **(1 day)**
